

# Firefighter Over-Ride Key-Switch

The Em-Vent firefighting keyswitches provide the most simple solution to firemans keyswitches available on the market today.

The devices are wired to the same 2 core detection loop circuit as the detectors and other AOV vent interface units.

The unit provides full control of the vents or dampers programmed to its operation. The unit also features a high intensity Red LED to attract fire fighters to the unit through a smoke logged corridor.

The unit can be either surface mounted on the included surface box or flush mounted to a single UK backbox.

Specification	
Operating Voltage	17-31V DC
Operating Temperature	-10 to +50 degrees
Storage Temperature	-30 to +60 Degrees
Max Humidity	95% RH non condensing at 40 Degrees
Colour	Hochiki ESP
Size	113x113
Mounting	Surface or flush
Devices per loop 126	126
Approvals	EN 54-18:2005
